

Leaf Prints

- Paint the vein side of a leaf with thick paint. Try to get the perfect consistency of paint. Paint too liquid will create a shapeless blob. Paint too thick will hide the designs of the veins.
- Carefully place the leaf, paint side down, on white or light coloured paper. Cover it with a piece of scrap paper and press down without letting the leaf move.
- Remove the scrap paper and lift off the leaf.
- Once you are comfortable with the technique, you can try different leaf-print patterns by mixing several colours.
